“At last Electric Heating You can afford to run”

These “state of the art” electric radiators operate just like a conventional “wet” system radiator, heat up and perform like “wet” system radiators and all without the requirement of a central boiler.

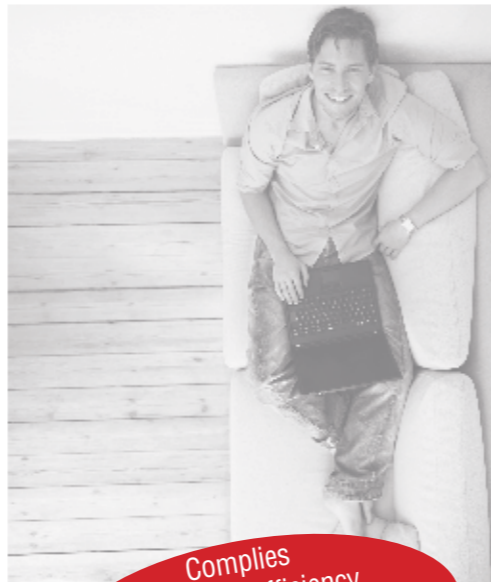

Our unique range of electric radiators provides the combined benefits of both wet systems and storage heaters. Quality heat, with low running costs yet heat when you want it in the quantity’s you desire and at a similar running cost to gas.

The heat is radiated into the room giving an even temperature from floor to ceiling, thus avoiding the draw backs of lesser systems which may rely on convection and deliver a huge variance leading to “cold feet syndrome”.

Clearly running costs are variable with heater style, weather conditions, insulation, personal habits and electricity tariff, however using a normal competitive 24 hour tariff will achieve excellent results.

Produced to the highest quality standards using “state of the art” technology leads to :-

- **Running costs from only a few pence per hour.** Experience shows that due to the latest technology these radiators actually only use a few hours of energy per day keeping running costs down.
- **“State of the art” energy management technology.** The product contains a microchip optimizer which actually controls and restricts the flow of electricity ensuring that energy is not wasted unnecessarily.
- **Cost effective alternative to Electric storage, Oil, LPG or Solid fuel.** No unsightly oil or LPG storage tank. Capital costs will be far lower leaving you considerably more money to spend elsewhere.
- **24 hour fully programmable / controllable and flexible system.** Each radiator has its own thermostat in order to set and deliver desired temperatures exactly when you require heat. Multi Time and temperature settings can also be achieved via the control system --- do not be fooled by cheap plug in timers --- constant switching on and off is a false economy.
- **“Central heating without pipes”** --- Perfect for domestic 13 amp socket plug and go whole house or just conservatory heaters. No costly or messy and intrusive installation.
- **Plug into a 13 amp socket** or fuse spur and benefit from a full “state of the art” central heating system from as little as one room up to a multi room installation.
- **5 year guarantee.** Due to superior quality of our products we are proud that we can offer 5 years guarantee on radiator. The absence of moving parts means these radiators are maintenance free, no boilers, pipes, flues or pumps. Hence no costly annual verifications.

Complies with energy efficiency requirements in the building regulations part L1 and 2.

Radiator Controls

The product can be used as a stand alone radiator with thermostat manually operated.

However for optimum performance, running costs and convenience can be controlled Multi time, Multi temperature via any windows computer.

Radio receiver fitted to the radiator, communicates with a USB transmitter attached to your windows pc.

Centrally controlled allowing each radiator :-

- Easy set up
- Multi Time
- Multi Temperature
- 24 hour / 7 day
- Measure exact energy consumption of each radiator
- Energy saving function unique (door opening, sudden cold blast)

Technical Characteristics

Watts	Height (mm)	Width (mm)	Depth (mm)
500 single	600	500	90
750 single	600	700	90
1000 single	600	900	90
1200 single	600	1100	90

Watts	Height (mm)	Width (mm)	Depth (mm)
1275 Double	600	700	100
1640 Double	600	900	100
2000 Double	600	1100	100
