

# IS YOUR HOME MAKING YOU ILL ?

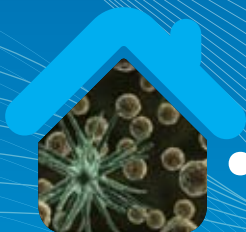

1 in 5 Households suffer from

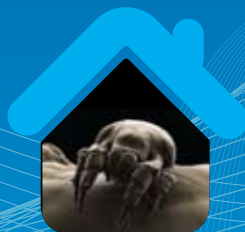

• Asthma

• Condensation

• Mould

• Mites

• Headaches and related ailments

## Why ?

We sealed our homes to preserve heat loss & energy.  
Trapping old used stale air.  
A breeding ground for mites and mould spores.

### A CATEGORY I HEALTH RISK

*All the solutions overleaf are either very simple for the average DIY, Competent tradesman, or our own fitting team.*

The Ultimate Solution to resolve  
Mould, Condensation  
and restore clean air

## Whole House Positive Input Ventilation (PIV)

Mounted in the loft with a discreet ventilation cover in the ceiling.

This works by a constant trickle of clean air displacing and replacing the old stale air, which in turn reduces excess moisture and so restoring harmony.

Very simple DIY Install

**Cost £350 inc vat and delivery.**

See tech sheet PIV

## Intelligent Passive Stack Ventilation (PSV)

Can be used just for wet rooms or whole house, a simple silent, ergonomically pleasing product that draws out moisture laden air to a roof vent.

The aperture senses the moist air and opens automatically, air is directed through the duct to a roof terminal where it is vented to the outside air.

The air inside a house is almost always warmer than that outside, and so rises up the duct by natural convection, carrying moisture with it.

Wind blowing across the roof provides additional suction (the venturi effect).

Lasts the lifetime of the house with no maintenance ever .....

**Cost £280 inc vat and delivery**

See Tech sheet PSV & PSV 2

## Fresh Wall Vents

Although we can remove stale air, fresh air needs to take its place in some instances it is worth improving the flow of fresh air. PIV achieves this but an alternative is Fresh Wall Vents.

**Fresh Wall vents Cost £xxx**

See Tech sheet Fresh Wall Vents

Most modern windows have ventilation grilles fitted, however in older property's this is not the case so consider :-

**Energy Saver Vent Cost £**

See Energy Saver Vent
